

SBR - CORK

WALK WITH US TOWARDS SUSTAINABILITY

MOVE ON BY JOINING US!

Get ready to know the main benefits this alliance has for you and your business.

WHAT IS IT?

- SBR stands for Styrene-Butadiene Rubber. It's a flexible and durable material with grip properties and high resistance to abrasion. This material is transformed through vulcanization.
- By collecting the waste produced by the cork industry, we're able to incorporate up to 35% of residues of this natural material.

WHY?

- Cork industry contributes to the reforestation of the Cork Tree, essential for the balance and sustainability of the rural areas of the Mediterranean. Cork harvesting is an environmental friendly practice as it doesn't damage the tree.
- By giving a new life to its waste we're keeping with a deep commitment to a logic of reusing and recycling. This is a way to promote sustainability by reducing consumption and carbon footprint.
- Cork Incorporation contributes for a lighter and flexible material with excellent thermal and acoustic properties.
